Dear Hiring Manager,

I am applying for the Middle Machine Learning Engineer role at PPC Energy Services, Digital Solutions, in Bucharest.

At FlowSpace I built and owned an LLM-based data extraction pipeline that ingests brochures, websites and spreadsheets in any format and pushes over 900 validated listing records to production after human review. I also built RAG-backed support agents that answer customer queries against live platform data with confidence scoring, escalating to a human when confidence is low, plus the Python tooling and Supabase/PostgreSQL layer these systems run on, and shipped features behind production APIs end to end. My depth is in applied ML: LLM pipelines, embeddings, evaluation and fine-tuning basics, rather than large-scale model training on Spark or SageMaker, and I would come into this role ready to build on your AWS-native stack.

What draws me to PPC is applying that same pipeline discipline to a domain with real operational stakes, an energy system that communities depend on.

I am based in Venice, Italy, and hold Italian EU long-term resident status. I am not currently authorised to work in Romania and would need the applicable employer-side permit; I am ready to relocate and complete that process.

Regards,
Prabhavit Gupta
