Dear Paradise Media team,

I'm applying for the Full-stack Developer (AI-native) role. Combining full-stack and DevOps/SRE work while using AI natively to move faster is close to what I've been doing at FlowSpace, a workspace marketplace I helped grow from 2,000 to 4,500+ users.

There I built an LLM listing pipeline that has drafted 900+ workspace listings for human review before they go live, plus RAG-based support agents that answer against live platform data and escalate to a person on low confidence. The stack overlaps with yours: Next.js, Laravel, Supabase and Python, with Claude Code as a daily coding assistant, not an occasional one. A runnable sample of the same document-to-structured-data pattern sits at github.com/prab-gupta/llm-doc-parser.

I like that Paradise Media is independent, capital-backed and fast-moving, and that you weigh a shipped project over a polished CV. I'm based in Venice and ready to relocate to Malta, or to work remotely if that's on the table. I hold Italian EU long-term residence rather than Maltese work authorisation, so I'd need the employer-side permit process, and I'm ready to start it.

Regards,
Prabhavit Gupta
