Dear PharmaHera team,

I am applying for the Data & AI Engineer role in Berlin. The way this role is scoped, specifying and reviewing systems built with an LLM coding agent rather than typing every line, is close to how I already work.

At UltraStrategy I built a CV-parsing pipeline integrated into the platform: a candidate uploads a CV, the pipeline extracts the data with Affinda and assesses fit for specific role types, the result is shown in the frontend, and the Claude API generates a standardised Ultra CV. I also built the platform serving the different user profiles behind it. At FlowSpace I own an AI listing bot end to end: given a workspace provider's brochure in any format, it drafts the full listing with a human in the loop and has produced 900+ drafted listings, and I also built support agents that answer from live platform data and escalate on low confidence.

Claude Code is my daily engineering environment, the way this role expects: I use it to turn a specification into a working pipeline, then review, test and own the result. I have working knowledge of MCP for exposing tools an agent can call reliably, and I bring Python and SQL from data-extraction and automation work, though BigQuery and Airflow specifically would be new tooling I would pick up quickly given how familiar the underlying pattern is.

I hold Italian EU long-term resident status. I am not currently authorised to work in Germany and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process, and I am available immediately.

Regards,
Prabhavit Gupta
