Dear Primer hiring team,

I am applying for the Senior Forward Deployed Engineer, Germany role. I want to be upfront: I have three years of professional experience, and the shape of that work has consistently been sitting inside a client's environment and delivering production AI solutions against their real data, from discovery through deployment.

At FlowSpace I built and still own an AI listing bot that takes a workspace provider's brochure, in any format, and drafts a structured listing with a human in the loop before it reaches the backend, producing more than 900 draft listings, and I built support AI agents that answer customer queries from live platform data in production, escalating to a human when confidence is low. I also automated the migration of the live marketplace itself off a legacy stack onto Next.js and Laravel while the product stayed live.

At UltraStrategy I built a CV-parsing pipeline integrated into the platform end to end: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific kinds of roles, the result is shown in the frontend, and a standardised Ultra CV is generated, using Affinda and the Claude API for parsing and generation and n8n and Eden AI for the surrounding orchestration. Alongside that, at Urlink I built platform logic and client-driven automations with AI-assisted development on Next.js and Supabase, working directly with client requirements as the project manager on the account.

I hold Italian EU long-term resident status. I am not currently authorised to work in Germany and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process.

I would welcome the chance to talk through how I would approach delivering a first solution for one of Primer's customers.

Regards,
Prabhavit Gupta
