Dear Hiring Manager,

I am applying for the AI Engineer role with PwC Slovakia's Advanced Technology Solutions team in Bratislava. At FlowSpace, a workspace marketplace, I have spent close to three years building and operating AI agents and LLM-powered tools in production. I built an AI listing pipeline that takes a workspace provider's brochure, a PDF, a website, or a spreadsheet, and drafts a full structured listing, with a human reviewer checking every output before it goes live. I also built a support AI agent that answers customer queries against live platform data and escalates to a person whenever its confidence is low, and, earlier, a CV parsing tool using n8n and Eden AI that extracted structured data from unstructured documents.

My day to day stack is TypeScript, Node.js and Python, alongside Laravel, Supabase and REST API integrations. I use Claude Code daily as my primary development tool, so working with AI-assisted tools such as the GitHub Copilot and Claude Code your posting names is already how I build and ship. I took over a live marketplace on a legacy stack and led its migration to a coded Next.js and Laravel stack while it stayed live, scaling the platform from 2,000 to 4,500 users.

I hold Italian EU long-term resident status. I am not currently authorised to work in Slovakia and would need the employer-side permit or sponsorship process, which I am ready to start immediately, and I am ready to relocate to Bratislava.

Regards,
Prabhavit Gupta
