Dear Hiring Manager,

I am applying for the Full Stack Software Engineer role at QASCOM in Bassano del Grappa.

At FlowSpace, a workspace marketplace platform, I am the lead developer responsible for a live migration off a legacy stack onto Next.js and Laravel. I mapped the old data structure to the new one, moved each entity through API endpoints or CSV exports, and ran the cutover while the product stayed live and grew from 2,000 to 4,500+ users, on a Supabase (PostgreSQL) database. I also built an AI listing bot that turns a workspace provider's brochure into a structured draft listing with a human in the loop, and support AI agents that answer customer queries from live platform data and escalate to a person on low confidence, both running in production rather than a demo.

Earlier, at UltraStrategy, I built a CV-parsing pipeline. A user uploads a CV, the pipeline extracts the data with Affinda and the Claude API, scores the candidate's relevance for specific role types, delivers the result to the frontend, and generates a standardised Ultra CV.

That combination, production LLM systems paired with relational data and API integration work, is what draws me to a role built around RAG and fine-tuned LLM deployment alongside maintaining complex distributed systems in production.

I live in Venice, about an hour from Bassano del Grappa, so the commute is straightforward and I am glad to be on site or hybrid. I hold Italian EU long-term resident status, so no sponsorship is needed, and I am available to start on short notice.

Regards,
Prabhavit Gupta
