Dear QuantumBlack Hiring Team,

I am writing to apply for the Senior Forward Deployed Engineer role deploying EcliptOS. I want to be upfront that I have three years of professional experience, not the four or more you are looking for, and my production background is in application-layer AI systems and TypeScript/Laravel rather than Kubernetes cluster architecture or cloud infrastructure administration. What I bring is real experience taking agentic, AI-driven systems from idea to something real users depend on, working directly embedded with the people who use them.

At FlowSpace, I took over a live workspace marketplace and automated its migration off a legacy stack onto Next.js and Laravel while the product stayed live, growing usage from 2,000 to 4,500 plus users. I built and still own an AI listing bot that turns a provider's brochure, in any format, into a drafted listing with a human in the loop, producing over 900 drafts, and I built support AI agents that answer customer queries from live platform data and escalate to a person when confidence is low. I also shipped the OfficeRnD and Nexudus API integrations that power automated bookings on the platform, real production integration work across enterprise-style third-party systems.

At UltraStrategy, I built the CV-parsing pipeline behind the platform: a user uploads a CV, the pipeline extracts the data with Affinda and scores how relevant the candidate is for specific role types, the result reaches the frontend, and the pipeline then generates a standardised Ultra CV using the Claude API. I built this with n8n and Eden AI, an agentic pipeline from raw input to a delivered result, plus the platform serving different user profiles.

I use Claude Code daily for AI-assisted development and am comfortable being the person who owns an integration end to end, from the data layer through to what a client sees.

I hold Italian EU long-term resident status. I am not currently authorised to work in Germany and would need the applicable employer-side permit or sponsorship process, which I am ready to complete. I would welcome the opportunity to discuss whether my experience is a fit for the team.

Regards, Prabhavit Gupta
