Dear Quickbase hiring team,

I am applying for the Software Engineer 1 role supporting the marketing website on Payload CMS. The role's emphasis on working directly with AI coding tools as a daily part of the job, alongside React, TypeScript and API work, matches how I already build.

At FlowSpace, I am the lead developer on a live coworking marketplace. I automated the platform's migration off a legacy stack onto Next.js and Laravel, mapping the old data structure to the new one and migrating each entity through API endpoints or CSV exports while the product stayed live, growing the platform from 2,000 to 4,500+ users. I built and operate an AI listing bot that turns a brochure in any format into a drafted listing with a human review step, more than 900 listings produced, and I shipped OfficeRnD and Nexudus API integrations for automated bookings. I use Claude Code as a core part of my daily workflow, the same tool this role names.

At Get2Germany, I integrated Google APIs into the platform and built AI tools that find courses, internships and jobs for users, working directly with REST APIs end to end, from request handling to debugging responses.

I hold Italian EU long-term resident status. I am not currently authorised to work in Bulgaria and would need the applicable employer-side permit or sponsorship process, which I understand the employer would file. I am ready to relocate to Sofia and complete that process.

I am comfortable with Git branching and pull request review, and I am coachable, early in my engineering career, and glad to grow under senior engineers' guidance.

Regards,
Prabhavit Gupta
