Dear RapidSOS hiring team,

I am applying for the Software Engineer II, AI role in Prague. I am a full-stack and AI engineer with three years of production experience shipping AI agents and the APIs, backend and evaluation checks behind them, and the safety-critical impact of your Voice AI work is exactly what draws me to it.

At FlowSpace I built support AI agents that answer customer queries against live platform data and escalate to a human whenever confidence is low, then triaged and resolved the resulting customer issues end to end, on a marketplace that grew from 2,000 to 4,500+ users. I also automated the platform's live migration off a legacy stack onto Next.js and Laravel while the product stayed live.

At UltraStrategy I built a CV-parsing pipeline using Affinda and the Claude API, orchestrated with n8n: a user uploads a CV, the pipeline extracts the data, scores how relevant the candidate is for specific role types, and generates a standardised profile. Getting that scoring right meant checking every extraction against the source document rather than trusting it outright, the same discipline behind evaluation-driven engineering. At Get2Germany I integrated Google APIs into AI tools that surface courses, internships and jobs.

To be direct: I have not shipped real-time voice or telephony systems in production, and my cloud infrastructure experience is working knowledge rather than deep operational ownership; I am keen to grow into both. I hold Italian EU long-term resident status. I am not currently authorised to work in Czechia and would need the applicable employer-side permit or sponsorship process, and I am ready to relocate and complete it.

Regards,
Prabhavit Gupta
