Dear Recare Hiring Team,

I am writing to apply for the Senior Forward Deployed Platform Engineer role. I have spent the last three years building and operating AI systems inside live products, which is close to what this role describes: getting AI engineers' work safely into production and keeping it reliable.

At FlowSpace, I built and still own an AI listing bot that turns a workspace provider's brochure, in any format, into a drafted listing with a human in the loop, producing over 900 drafts, and I built support AI agents that read live platform data and escalate to a person on low confidence. Both run in production against a live marketplace that grew from 2,000 to 4,500 plus users, using Claude Code and the Claude API day to day.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant the candidate is for specific roles, the result is shown in the frontend, and a standardised CV is generated. I used Affinda and the Claude API for the parsing and generation, and n8n and Eden AI for the extraction tooling itself, which meant owning that pipeline end to end rather than just the model call.

I have three years of professional experience and I am honest that this role's core requirement, deep hands-on production ownership of AWS infrastructure (SageMaker, EKS, CloudFormation) and Kubernetes-based GPU inference, is not something I have run myself. My working knowledge is in Python and FastAPI, and in shipping the AI workloads themselves rather than the cloud platform underneath them. What I bring is direct experience getting AI features from code into a live product and keeping them monitored and reliable at the application layer.

I hold Italian EU long-term resident status. I am not currently authorised to work in Germany and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process.

I would welcome the opportunity to discuss how I could contribute to the team.

Regards,
Prabhavit Gupta
