Dear Hiring Manager,

I am applying for the GenAI Developer role at Redeploy. The role matches how I already work: turning a business problem into a production RAG or agentic system end to end, from the first stakeholder workshop through to a working interface.

At FlowSpace, a workspace marketplace, I built and operate a support AI agent, a production RAG system answering customer queries against live platform data and escalating to a person whenever its confidence is low. I also built the AI listing pipeline: it takes a provider's brochure, PDF, website, or spreadsheet and drafts a full structured listing, routed through a human reviewer before going live, over 900 listings so far, scaling the platform from 2,000 to 4,500 users.

Earlier, at UltraStrategy, I built a CV-parsing pipeline: a user uploads a CV, the pipeline extracts the data, assesses how relevant the profile is for specific role types, and generates a standardised Ultra CV, using Affinda for parsing and the Claude API for generation, orchestrated with n8n and Eden AI. At Urlink in Barcelona, I worked directly with the client on the platform and its logic, then automated their specific requirements, the same discovery-to-delivery pattern Redeploy runs across the Nordics.

I am based in Venice, Italy, and ready to relocate to Stockholm. I hold Italian EU long-term resident status, am not currently authorised to work in Sweden, and would need the applicable employer-side permit or sponsorship process, which I am ready to start immediately.

Regards,
Prabhavit Gupta
