Dear Relativity team,

I am writing to apply for the Advanced AI Engineer role on the Agent Harness team. I have three years of professional experience building LLM-powered pipelines and agentic systems that run in production, working directly with data extraction, orchestration and evaluation loops rather than in isolated demos.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data with Affinda and assesses the candidate's fit for specific role types, the result is delivered to the frontend, and a standardised "Ultra CV" is generated using the Claude API. The extraction and generation logic ran as an orchestrated pipeline built with n8n and Eden AI, and I also built the platform that serves the different user profiles behind it.

At FlowSpace, I built support AI agents that answer customer queries from live platform data and escalate to a human when confidence is low, a production agent that has to handle real users and real failure modes rather than a controlled test set. I also own an AI listing bot that turns a brochure in any format into a drafted listing with a human in the loop before it reaches the backend, using the Claude API and TypeScript, with over 900 listings drafted so far.

My core stack is Python for automation, data pipelines and QA, alongside TypeScript and Node.js, with working knowledge of Docker and PostgreSQL. I use Claude Code and the Claude API daily, and I am comfortable picking up LangGraph and LangChain quickly given my existing background orchestrating LLM pipelines and tool integrations.

I hold Italian EU long-term resident status. I am not currently authorised to work in Poland and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process, or to continue this work remotely from Italy if that fits the team's setup.

I would welcome the opportunity to discuss how I could contribute to the Agent Harness team.

Regards,
Prabhavit Gupta
