6 September 2026

Dear Hiring Team,

I am applying for the Forward Deployed Engineer role in Merchandising. What drew me in is the line that this is not a consulting role: the improvement has to be right, hold up in front of the customer's own analysts, and run in production every week. That is the standard I have been working to.

At FlowSpace, a live workspace marketplace, I owned technical delivery end to end. I ran discovery with operators, built the production full stack (Next.js, Node.js, Laravel, Python, PostgreSQL), shipped integrations against OfficeRnD, Nexudus, CRM and payment APIs, and built an agentic data pipeline with human review that processed 900+ records. The platform grew from 2,000 to 4,500+ users during that time. Every piece was instrumented: I measured acceptance rates and error counts against the manual baseline, presented the numbers to the founders, and handed over documentation so the team could operate and extend the system without me.

I have not worked in retail merchandising or pricing yet. I have repeatedly learned a new domain and codebase fast, across eight European companies in three years, and I am comfortable being productive before I feel fully up to speed. I use AI tooling in all of my daily work and have led its adoption in a non-technical team.

I am based in Venice, Italy, hold an EU Long Term Residence Permit so no sponsorship is needed in France, and I am open to relocating to Paris and travelling to customer sites. Fluent English, available immediately.

Regards,
Prabhavit Gupta
