Dear Hiring Manager,

I am applying for the Agentic AI Developer role at Renessai.

At FlowSpace, I built agentic systems as my core work, not a feature bolted onto a product. I built an AI pipeline that ingests provider brochures in any format, PDF, website, spreadsheet, or photo, and uses LLM-driven extraction with human-in-the-loop review to turn them into structured listings, producing over 900 drafted listings for review. I also built RAG-backed support agents that answer customer queries against live data and escalate to a human on low confidence, with evaluations to track output quality over time. My stack is Next.js, TypeScript, Laravel, and Supabase, and I use coding agents, primarily Claude Code, as my default way of working.

Renessai's focus on agentic systems as the product itself, not a chat window on top of existing software, is exactly the work I want more of, and treating evaluations as part of the system rather than an afterthought matches how I already think about shipping.

I am based in Venice, Italy. I hold Italian EU long-term resident status, am not currently authorised to work in Finland, and would need the applicable employer-side permit. I am ready to relocate to Helsinki and start that process.

Regards,
Prabhavit Gupta
