Dear Hiring Team,

I am applying for the Founding Engineer role at SANOVIO. European healthcare procurement is exactly the kind of messy, high-stakes, workflow-heavy problem that rewards a generalist who can own a flow end to end, and building the AI-powered infrastructure to fix it is the kind of problem I want to spend the next few years on.

At FlowSpace I built and owned product workflows the same way this role describes. My flagship project was an AI listing pipeline: it takes a workspace provider's brochure in any format (PDF, website, photo, or spreadsheet), runs it through LLM extraction with retrieval and a human-in-the-loop review step, and pushes structured records to the backend, hundreds of listings processed so far. I also built support agents that answer customer questions against live platform data and escalate to a person on low confidence, shipped OfficeRnD and Nexudus booking integrations end to end, and led a live-product migration off a legacy stack onto a coded Next.js and Laravel platform while the product stayed live, scaling FlowSpace from 2,000 to 4,500+ users.

That is the same shape as this role: React and TypeScript on the frontend, backend and data pipelines underneath, and AI-enabled systems (embeddings, retrieval, agents) as the layer that creates real leverage, all owned by one person moving fast under incomplete requirements. I make pragmatic architecture calls, ship, and iterate on real usage instead of waiting for a full spec.

I am based in Venice, Italy (CET), hold an EU Long Term Residence Permit so no sponsorship is needed anywhere in the EU, I am open to relocating to Munich, and I am available immediately.

Regards,
Prabhavit Gupta
