Dear STAM Hiring Team,

I am writing to apply for the Software Engineer/Developer role in the Digital Solutions Business Area in Genoa. I have three years of continuous professional experience across eight European companies, building web based solutions end to end, from requirements analysis through frontend and backend implementation to QA.

At FlowSpace, a live workspace marketplace, I took over an existing platform and automated its migration off a legacy stack onto Next.js and Laravel, mapping the old structure to the new one, choosing the migration path per entity between API endpoints and CSV exports, and driving the cutover while the product stayed in production. In the same role I integrated the OfficeRnD and Nexudus APIs for automated bookings and built an internal tool for calculating commute times, working closely with the rest of the development team on both product and business logic documentation, close to the full software development life cycle involvement this role calls for.

At Get2Germany, I built and optimised the platform's database while integrating Google APIs, and at Tractionboard I worked on responsive interfaces and debugging alongside a ChatGPT/OpenAI integration, which maps directly to the responsive web interface and database work described in the role.

I hold a good working knowledge of Python, JavaScript and TypeScript, have worked with relational databases including Supabase and PostgreSQL, and I am comfortable with Jira, Trello and Slack in an agile team setting. My English is professional and I regularly draft technical project documentation. I hold Italian EU long term resident status and am authorised to work in Italy without sponsorship, and I am open to relocating to Genoa for the role.

I would welcome the opportunity to discuss how I could contribute to STAM's Digital Solutions team.

Regards,
Prabhavit Gupta
