Dear Siemens Energy Hiring Team,

I am writing to apply for the AI Implementation Specialist role in Amadora. I have spent the last three years doing exactly the work this role describes: partnering with a business, finding where AI can remove manual effort, and shipping the agent or workflow that does it.

At FlowSpace, I built support AI agents that answer customer queries from live platform data and escalate to a human when confidence is low, running in production against a marketplace that grew from 2,000 to 4,500 plus users. I also built and still own an AI listing bot that takes a workspace provider's brochure, in any format, and drafts a full structured listing with a human in the loop, over 900 drafts produced, using n8n and the Claude API.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores relevance for specific role types, the result is shown in the frontend, and a standardised CV is generated. I used Affinda and the Claude API for the parsing and generation, and n8n and Eden AI for the extraction tooling, working directly with the business team that needed the output.

On tooling, I want to be direct. My hands-on production experience is with the Claude API, OpenAI and n8n rather than Copilot Studio or the Power Platform, though I have completed Microsoft's Copilot Studio Agent Academy and Power Automate training and the underlying skill, turning a business process into a working AI agent, transfers directly.

My expected salary is around EUR 45,000. I hold Italian EU long-term resident status. I am not currently authorised to work in Portugal and would need the applicable employer-side permit or sponsorship process, and I am ready to complete that process.

I would welcome the opportunity to discuss how I could contribute to the team.

Regards,
Prabhavit Gupta
