Dear Snowflake hiring team,

I am applying for the Forward Deployed Engineer, Applied AI role on the Cortex AI team in Warsaw. I have three years of professional software engineering experience, and it has consistently involved shipping AI systems against a real customer's data and staying accountable for them in production.

At FlowSpace I automated the migration of a live workspace marketplace off a legacy stack onto Next.js and Laravel, mapping the old data structure to the new one and driving the cutover while the product stayed live and grew from 2,000 to 4,500+ users. I also built and own an AI listing bot that turns a provider's brochure in any format into a structured listing with a human in the loop, and support AI agents that answer customer queries from live platform data and escalate to a human on low confidence.

At UltraStrategy I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific kinds of roles, the result is shown in the frontend, and a standardised Ultra CV is generated, using Affinda and the Claude API for parsing and generation and n8n and Eden AI for the surrounding orchestration.

I hold Italian EU long-term resident status. I am not currently authorised to work in Poland and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Warsaw and complete that process.

I would welcome the chance to talk through how I would approach taking an AI pipeline from prototype to production for one of your enterprise customers.

Regards,
