Dear SoTalent Hiring Team,

I am writing to apply for the Senior Forward Deployed Engineer role you are recruiting for in Amsterdam, turning recurring business requirements into scalable AI-powered tools, automated workflows and dashboards. I have three years of experience doing exactly this: translating business needs into production technology, working directly with client and internal stakeholders throughout.

At FlowSpace I took over a live coworking marketplace and automated its migration off a legacy stack onto Next.js and Laravel, mapping the old data structure onto the new one and driving the cutover while the product stayed live, growing the platform from 2,000 to 4,500plus users. I also built and own a support AI agent that answers customer queries from live platform data and escalates to a human on low confidence, plus CRM and GTM automations for lead capture, enrichment and routing. Stack: TypeScript, Next.js, Node.js, Laravel, n8n and the Claude API.

At Urlink I built the platform and its logic with AI-assisted development and implemented automations driven directly by client requirements, acting as project manager on those requirements myself. Stack: Next.js, Supabase, Netlify, GitHub and bolt.new.

Both roles required bridging technical and non-technical stakeholders and shipping practical, deployable solutions rather than one-off prototypes, which is exactly the operating model this role describes.

I hold Italian EU long-term resident status. I am not currently authorised to work in the Netherlands and would need the applicable employer-side permit or sponsorship process; I am ready to relocate or work on-site there and to complete that process.

Kind regards,
Prabhavit Gupta
