Dear Hiring Team,

I am writing to apply for the Forward Deployed Engineer (Aviation) role in Hamburg. I have no aviation domain background, but three years of building and embedding AI-driven systems into live customer operations, with the systems integration and enterprise deployment work this role calls for.

At FlowSpace, a live workspace marketplace, I automated the platform's migration off a legacy stack onto Next.js and Laravel while it stayed live, mapping the old structure to the new one and choosing the migration path per entity, growing the platform from 2,000 to over 4,500 users. I shipped OfficeRnD and Nexudus API integrations for automated bookings, plus CRM and GTM automations for lead capture, enrichment and routing, and built support AI agents that answer customer queries from live platform data and escalate to a human on low confidence. All built with the Claude API, n8n and TypeScript.

At Get2Germany, based in Berlin, I integrated Google APIs for platform tracking and built AI tools that find courses, internships and jobs for users, alongside database optimisation work, using n8n and the Google API ecosystem. That role gave me direct experience with the kind of API-heavy, data-pipeline integration work this role asks for, plus familiarity with operating in the German market.

I am comfortable working on-site and embedded with customers for extended periods, and I take ownership of outcomes rather than treating a deployment as a handoff.

I hold Italian EU long-term resident status. I am not currently authorised to work in Germany and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Germany and complete that process.

Regards,
Prabhavit Gupta
