Dear Solvd hiring team,

I am applying for the Forward Deployed Engineer, Agentic AI role. I want to be upfront: I have three years of professional experience. In that time the common thread has been taking an ambiguous customer problem, building a thin working solution against real data, and staying involved until it runs in production.

At FlowSpace I automated the migration of a live workspace marketplace off a legacy stack onto Next.js and Laravel, mapping the old data structure to the new one, choosing the right path per entity, API endpoints or CSV exports, and driving the cutover while the product stayed live and grew from 2,000 to 4,500+ users. I also built and own an AI listing bot that takes a workspace provider's brochure in any format and drafts a full listing with a human in the loop, and support AI agents that answer customer queries from live platform data and escalate to a human on low confidence.

At UltraStrategy I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific kinds of roles, the result is shown in the frontend, and a standardised Ultra CV is generated, using Affinda and the Claude API for parsing and generation and n8n and Eden AI for the surrounding orchestration.

I can work with your Warsaw-based customers remotely from Italy, where I am authorised to work under my Italian EU long-term resident status. If the engagement needs me based in Poland, I would need the applicable employer-side permit or sponsorship process and am ready to relocate and complete it.

I would welcome the chance to talk through how I would approach discovery and early delivery for one of your GenAI engagements.

Regards,
Prabhavit Gupta
