Dear Hiring Manager,

I am applying for the Software Engineer, Platform role at Speechify.

Your Platform team owns payments, subscriptions, auth and the APIs the rest of the product depends on, and that is the work I have been doing at FlowSpace for the past two years. I helped migrate our marketplace to a coded Next.js and Laravel stack, then built and owned backend services on top: booking flows backed by Supabase and PostgreSQL, live OfficeRnD and Nexudus API integrations for automated bookings, and a production LLM pipeline that has drafted more than 900 workspace listings from raw broker material. Along the way I scaled the platform from 2,000 to 4,500+ users and carried production ownership, debugging it myself when a booking or an integration broke.

I want to work on backend systems that other product teams build on, at a company that is fully distributed by design rather than remote as an afterthought. Speechify's mission, turning any document into audio so reading is never the bottleneck, is also a problem I care about.

I am based in Venice, Italy, hold an Italian EU long-term residence permit, and can perform this role remotely from Italy without sponsorship. Available immediately.

Regards,
Prabhavit Gupta
