Dear Hiring Manager,

I am applying for the Fullstack Developer role at Staycation.

At FlowSpace, a workspace marketplace, I worked across the stack your team uses day to day: Next.js and TypeScript on the frontend, Node.js and Laravel on the backend, with Supabase and PostgreSQL as the data layer. I built and shipped booking flows end to end, including OfficeRnD and Nexudus integrations that kept availability and reservations in sync across the marketplace. I also built an AI listing pipeline that turned supplier brochures in any format into more than 900 listing records for human review, scaling how fast the marketplace grew its supply side.

Staycation is solving a problem I recognise: keeping two sides of a marketplace, hotels and guests, reliable at the same time while still shipping features that hold up in production. I like that this role spans discovery to production across web, mobile-adjacent and backend work.

I am based in Venice, Italy, hold an EU Long Term Residence Permit, and am ready to relocate to Paris or work remotely from elsewhere in France, joining Paris for the required in-person days. My Italian is beginner level; I work professionally in English.

Regards,
Prabhavit Gupta
