Dear Storm Technology Hiring Team,

I am writing to apply for the Microsoft Forward Deployed Consultant role in Dublin. I want to be upfront: my core stack is TypeScript, Next.js, Laravel and n8n rather than the Microsoft ecosystem, so Azure, Power Platform and Microsoft Fabric are not tools I have used day to day. What I can bring is exactly the pattern this role calls for: embedding with a client, translating a business challenge into a working solution, and using AI-assisted development to move fast from prototype to production.

At Urlink, I worked as project manager and AI-assisted developer on a freelance engagement in Barcelona, building the platform and its logic with AI-assisted development and implementing automations driven directly by client requirements, on Next.js, Supabase and Netlify. That is the same discovery-to-delivery motion this role needs, just on a different stack.

At FlowSpace, I integrated OfficeRnD and Nexudus into a live marketplace for automated bookings, built CRM and GTM automations for the sales funnel, and was the point of contact between the internal team and our agency, translating requirements both ways while the product stayed live and grew from 2,000 to 4,500 plus users.

I hold Italian EU long-term resident status. I am not currently authorised to work in Ireland and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Dublin and complete that process.

I would welcome the chance to discuss whether my automation and delivery experience, even without a Microsoft background, is a fit for the Data AI Practice.

Regards,
Prabhavit Gupta
