Dear Straker hiring team,

I am applying for the AI Ops Agent Engineer role. Straker's plan to build an autonomous enterprise, agents running day to day operations instead of people, is close to what I have spent the last two years doing: mapping a manual process, then building the agent that reliably replaces it.

At UltraStrategy I built a CV parsing LLM pipeline integrated into the platform. A user uploads a CV, the pipeline extracts the data, assesses how relevant the profile is for specific role types, delivers the result to the frontend, then generates a standardised Ultra CV. I used Affinda for parsing and the Claude API for generation, orchestrated with n8n and Eden AI.

At FlowSpace I built support AI agents that answer customer queries against live platform data and escalate to a person when confidence is low, so the system degrades gracefully instead of failing silently. I also built the listing pipeline that turns a workspace provider's brochure into a drafted listing using n8n and the Claude API, with a human reviewing before it goes live.

This is a fully remote role with an employment contract based in Ireland. I hold Italian EU long-term resident status and am not currently authorised to work in Ireland, so I would need the applicable employer-side permit or sponsorship process, and am ready to complete it. I can also work remotely from Italy as a contractor if that suits Straker better.

Regards,
Prabhavit Gupta
