Dear Stravito Hiring Team,

I am writing to apply for the Backend Engineer role. Your platform turns large volumes of market research documents into intelligent workflows, and that is close to work I have already shipped: building the API integrations and content pipelines that other teams and features build on top of.

At FlowSpace, I automated the migration of a live workspace marketplace off a legacy stack onto Next.js and Laravel, mapping the old data structure to the new one and choosing the migration path per entity while the product stayed live and grew from 2,000 to 4,500 plus users. I also built and still own an AI listing bot that takes a workspace provider's brochure, in any format, and drafts a full structured listing with a human in the loop, over 900 drafts so far, plus API integrations with OfficeRnD and Nexudus for automated bookings. This is the same shape of problem as content ingestion at scale, turning messy source material into a reliable data model behind an API.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores relevance for specific role types, the result is shown in the frontend, and a standardised CV is generated using Affinda and the Claude API, with n8n and Eden AI powering the extraction tooling itself.

I have three years of professional experience across eight companies, with a strong bias for engineering fundamentals and API design over any one stack. I am authorised to work from Italy under Italian EU long-term resident status and can perform this fully remote role from there. If the position is contracted through your Sweden entity, I understand I would need the applicable employer-side permit and am ready to complete that process.

I would welcome the opportunity to discuss how I could contribute to the team.

Regards,
Prabhavit Gupta
