Dear Swans hiring team,

I am applying for the Implementation Consultant (CRM, Automation, Data, AI) role, remote. I implement exactly those four things in real operational settings, and my three years of career (across eight European tech companies) have been almost entirely on the implementation side of AI and automation projects.

At FlowSpace I built the CRM-to-platform integration end to end: it captures leads from every source, enriches them, routes them, and drives the outbound motion automatically; the CRM feeds a pipeline that connects Attio, Amplemarket and Swan. In parallel I ran the OfficeRnD and Nexudus booking API integrations, which meant discovery with the platform teams, scoping the endpoints, and handing the customer team a solution they could operate without me watching it. The AI half of my day is the AI listing pipeline: unstructured input (PDF, web page, image, spreadsheet), LLM extraction with per-field prompts and confidence scoring, human review, and a push to the backend. The pattern is CRM plus automation plus data plus AI, which is your role in one sentence.

At UltraStrategy I built a CV-parsing implementation with n8n and Eden AI: unstructured CV in, structured data out, relevance scored per role type, frontend result, and then a standardised CV generated on top; I worked autonomously on the technical troubleshooting from analysis to resolution. At Get2Germany I integrated Google APIs and built AI-driven tools for course, internship and job discovery. I am Microsoft Copilot Studio Agent Academy and Tray.ai Build Practitioner certified for the CRM-adjacent tooling, and I code daily in TypeScript, Node.js and Python.

I am authorised to work remotely from Italy under an EU Long-Term Residence Permit and require no sponsorship for a remote engagement. I am available immediately and would welcome a conversation.

Kind regards,
Prabhavit Gupta
