Dear TERASi hiring team,

I am applying for the Forward Deployed Engineer role in Stockholm. I want to be upfront: I have three years of professional experience, and that work has consistently meant sitting close to a live product and its real users, wiring integrations and AI pipelines that have to work outside a demo environment.

At FlowSpace I automated the migration of a live workspace marketplace off a legacy stack onto Next.js and Laravel: I mapped the old data structure to the new one, chose the migration path per entity, API endpoints or CSV exports, and drove the cutover while the product stayed live and grew from 2,000 to 4,500+ users. I also built an AI listing bot that takes a provider's brochure in any format, PDF, website, photo or spreadsheet, and drafts a full listing with a human in the loop, and shipped OfficeRnD and Nexudus API integrations for automated bookings.

At UltraStrategy I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific kinds of roles, the result is shown in the frontend, and a standardised Ultra CV is generated. I used Affinda and the Claude API for the parsing and generation, and n8n and Eden AI for the surrounding orchestration.

I do not have a hardware or RF background, but the parts of this role I recognise, the end to end integration work, the Python and API plumbing that pushes data between a customer's stack and ours, and the discipline of sitting with a customer to figure out what they actually need before writing the demo, are exactly the shape of what I have been doing.

I hold Italian EU long-term resident status. I am not currently authorised to work in Sweden and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Stockholm and complete that process.

I would welcome the chance to talk through how I would approach one of your live opportunities.

Regards,
Prabhavit Gupta
