Dear Tacto team,

I am applying for the Product Engineer / Builder role in Munich.

The way you describe the job is the way I have worked for the last two years. At FlowSpace (coworking marketplace, London) I owned problems end to end rather than tickets: I noticed that onboarding an operator's inventory took days of manual copying, so I built the LLM pipeline that turns any operator brochure (PDF, website, photo, spreadsheet) into a validated listing after human review. It has produced 900+ listings and it started as a prototype shown to a real operator the same week. I built the RAG support agents that answer availability and pricing questions from live data and escalate to a person when confidence is low, and the OfficeRnD and Nexudus integrations that connect bookings to the systems operators already run. Along the way I helped move the product off a legacy stack onto Next.js and Laravel while it stayed live, and the platform grew from 2,000 to 4,500+ users.

I live in AI tools daily. Claude Code is my primary development tool, n8n and the Claude and OpenAI APIs are how I wire agents into workflows, and most of what I shipped last year would not exist without that leverage. My stack matches yours on both sides: TypeScript, React and Next.js on the front, Python and SQL on the back, PostgreSQL every day, and I am comfortable going up and down the stack when the outcome needs it. Procurement data that lives in Excel and legacy systems is the same kind of messy, high-value data I turned into structured records at FlowSpace, and an analytics engine that says "here is where you can save" is exactly the sort of product I want to build.

Logistics: I am based in Venice, Italy, hold an EU long-term residence permit and can relocate to Munich for four days a week in the office. Germany would need an employer-side work permit, which is routine for a full-time hire. English is my working language (C1); I do not speak German yet and would commit to learning it.

A runnable sample of how I build: github.com/prab-gupta/llm-doc-parser. CV attached.

Regards,
Prabhavit Gupta
