Dear Hiring Manager,

I am applying for the Forward Deployed Engineer role in Madrid. Splitting time between client-facing technical work and platform engineering is exactly the shape of the roles I have taken on across the last three years.

At FlowSpace, a coworking marketplace, I shipped OfficeRnD and Nexudus API integrations that connect booking systems into the live product, built an AI pipeline that turns operator brochures in any format into structured listings after human review, and automated the data migration off a legacy stack onto Next.js and Laravel while the product stayed live, growing the platform from 2,000 to 4,500 plus users. That work ran end to end, from mapping the client's data structure through to a working integration, on TypeScript, Node.js and React.

At Urlink I worked as both project manager and developer: built the platform and its logic with AI-assisted development, implemented client-driven automations, and owned client requirements directly, on Next.js, Supabase, Netlify and GitHub.

I am based in Venice, Italy, and hold Italian EU long-term resident status. I am not currently authorised to work in Spain without company-sponsored support and would need the applicable permit process, which I am ready to complete. My English is professional (C2) and my Italian is conversational.

Regards,
Prabhavit Gupta
