Dear Taxfix team,

I am applying for the AI First Builder (Product Management) role. I already work the way this role describes: taking a user problem from idea to a shipped feature without waiting for a full brief, and reaching for AI to close the gaps between product, design and engineering.

At Urlink, I was both the project manager on client requirements and the AI-assisted developer who built the platform and its logic. I translated client needs directly into shipped functionality on Next.js, Supabase and Netlify, and implemented the automations clients asked for, without handing the spec to someone else first.

At FlowSpace, I own the full loop on a live marketplace. I automated its migration off a legacy stack onto Next.js and Laravel while the product stayed live, taking it from 2,000 to 4,500+ users. I built an AI listing bot that turns a workspace brochure, in any format, into a drafted listing with a human in the loop, producing over 900 listings, and support AI agents that answer from live platform data and escalate on low confidence. I use Claude Code daily and reach for AI tools because they make me faster, not because I have been asked to.

I hold Italian EU long-term resident status. I am not currently authorised to work in Germany and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Berlin and complete that process.

I would welcome the chance to bring this builder instinct to Taxfix's R&D team.

Regards,
Prabhavit Gupta
