Dear TechTree hiring team,

I am applying for the Forward Deployed Engineer role in Warsaw. I have three years of professional experience, and the shape of that work has consistently been owning a project end to end, from understanding a customer's workflow through to a deployed, iterated system.

At FlowSpace I took over a live workspace marketplace and automated its migration off a legacy stack onto Next.js and Laravel, mapping the old structure to the new one and driving the cutover while the product stayed live and grew from 2,000 to 4,500+ users. I also built and own an AI listing bot that turns a provider's brochure in any format into a drafted listing with a human in the loop, plus support AI agents that answer customer queries from live platform data and escalate to a human when confidence is low.

At UltraStrategy I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific kinds of roles, the result is shown in the frontend, and a standardised Ultra CV is generated, using Affinda and the Claude API for parsing and generation and n8n and Eden AI for the surrounding orchestration.

I hold Italian EU long-term resident status. I am not currently authorised to work in Poland and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Warsaw and work on-site, and to complete that process.

I would welcome the chance to talk through how I would approach a customer discovery-to-deployment cycle for TechTree.

Regards,
Prabhavit Gupta
