Dear Hiring Manager,

I am applying for the Software Engineer role at Teero.

Teero is a marketplace matching dental offices with the hygienists and staff who fill their shifts, and that supply and demand problem is what I have spent the last two years building for. At FlowSpace, a coworking marketplace, I worked across the full stack: Next.js and TypeScript on the frontend, Node.js and Laravel on the backend, Supabase and PostgreSQL for data. I built booking flows and shipped OfficeRnD and Nexudus integrations that kept availability and reservations in sync with real provider calendars, the same shape of problem as keeping staffing supply accurate. I also built and shipped an LLM based listing pipeline that turns brochures, websites, and spreadsheets into structured, human reviewed listings, producing over 900 drafted records, an AI product I owned end to end. I use Claude Code daily as my primary development tool.

I am based in Venice, Italy, and ready to relocate to Amsterdam for this in person role. I hold Italian EU long term resident status. I am not yet authorised to work in the Netherlands and would need the employer side highly skilled migrant permit, which I am ready to pursue.

Regards,
Prabhavit Gupta
