Dear Tekst Hiring Team,

I am writing to apply for the Solution Engineer, Delivery role in Ghent. Over the past three years I have taken signed solutions and turned them into working implementations that customers actually use, which is the core of what this role asks for.

At FlowSpace, I took over a live workspace marketplace and drove the technical delivery of its migration off a legacy stack onto Next.js and Laravel: I mapped the old structure to the new one, integrated OfficeRnD and Nexudus through their APIs for automated bookings, and built GTM automations for lead capture, enrichment and outbound, all while the product stayed live and grew from 2,000 to 4,500+ users. I also built and still own an AI listing bot that turns a workspace brochure in any format into a drafted listing with a human in the loop, so I have direct experience getting LLM and agentic technology into a working, customer-facing setup rather than leaving it as a prototype.

At Urlink, I worked as both project manager and developer: I sat with the client to understand their requirements and then built the platform and the automations they needed on top of it, using Next.js, Supabase and Netlify. That combination of owning the client relationship and doing the technical build myself is close to what a delivery-stage solution engineer does once a deal is signed.

I am comfortable with REST APIs, webhooks and scripting in TypeScript and Python, and I enjoy the part of the job that involves digging into a customer's messy existing setup and turning it into something automated and clear.

I hold Italian EU Long Term Residence status. I am not currently authorised to work in Belgium and would need the applicable employer-side permit or sponsorship process; I am ready to relocate and complete that process for the Ghent role.

I would welcome the opportunity to discuss how I could contribute to the delivery team at Tekst.

Regards,
Prabhavit Gupta
