Dear Teradyne AI enablement team,

I am writing to apply for the Technical Lead Manager, Forward Deployed Engineering role in Odense. I have three years of experience rather than the eight you list, and no formal team management history, so I want to be direct about that. What I can offer is hands-on delivery of AI and automation solutions end to end, in production, which is the technical core the role asks for.

At FlowSpace, a workspace marketplace, I own the AI layer on a live product: an AI listing bot that takes a workspace provider's brochure in any format and drafts the full listing with a human in the loop before it reaches the backend, and support agents that answer customer queries from live platform data and escalate to a human on low confidence. I also drove the migration of the platform off a legacy stack onto Next.js and Laravel, mapping the old structure to the new one and choosing the migration path per entity, while the product stayed live and grew from 2,000 to 4,500 plus users. Claude Code is part of my daily workflow, on this and every other project.

At UltraStrategy, I built a CV-parsing pipeline using Affinda and the Claude API, orchestrated in n8n with Eden AI for extraction: a user uploads a CV, the pipeline scores role relevance, and it generates a standardised profile automatically. That is the same pattern this role asks for, taking a repeated business need and turning it into a reusable capability.

I read the seniority gap honestly. If the bar for this specific role is a strict fit on years and people management, I understand that. I would still welcome a conversation about where I could add value to the regional pod.

Regards,
Prabhavit Gupta
