Dear Thought Machine Hiring Team,

I am writing to apply for the Full Stack Engineer role in your Lisbon Engineering Hub. My background is not in banking, and I want to say that plainly rather than stretch a claim. What I bring instead is three years of shipping full-stack features end to end in React, TypeScript and REST APIs, which is the core of what this role asks for.

At FlowSpace, I took over a live workspace marketplace and drove the data migration off a legacy stack onto Next.js and Laravel: I mapped the old structure to the new one, chose the migration path per entity through API endpoints or CSV exports, and ran the cutover while the product stayed live and grew from 2,000 to 4,500 plus users. I shipped OfficeRnD and Nexudus API integrations end to end, backend and frontend, and I am comfortable taking a requirement through design, implementation and production support.

At Clubee, I integrated the Clubee API across the frontend and ran unit testing and quality assurance on new features, building shop, domain-integration and federation-dashboard tools. That is the same discipline this role asks for, writing automated tests as part of shipping a feature, not as an afterthought.

My day-to-day stack is TypeScript, React, Node and PostgreSQL, with working knowledge of REST API design and Docker for packaging services. I do not have production banking or AWS experience, but I am a fast learner in unfamiliar domains and would welcome the chance to build that depth here.

I hold Italian EU Long Term Residence status. I am not currently authorised to work in Portugal and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Lisbon and complete that process.

I would welcome the opportunity to discuss how I could contribute to the engineering team at Thought Machine.

Regards,
Prabhavit Gupta
