Dear Triple Hiring Team,

I am applying for the Forward Deployed Engineer role. I have three years of professional experience shipping production software and sitting close to the client while I do it, across eight teams in Europe, and I am comfortable owning a technical integration from first scoping call to stable production.

At FlowSpace, I lead the engineering side of a live workspace marketplace. I automated the migration off a legacy stack onto Next.js and Laravel: mapping the old data structure to the new one, moving each entity through API endpoints or CSV exports depending on what fit, and running the cutover while the product stayed live, growing the platform from 2,000 to 4,500 plus users. I also built support AI agents that answer customer queries from live platform data and escalate to a human on low confidence, plus OfficeRnD and Nexudus API integrations for automated bookings, so I have shipped client-facing AI agents and enterprise-system integration layers, not just prototypes.

At Urlink, I worked as project manager and AI-assisted developer on a client engagement in Barcelona: I gathered client requirements directly, built the platform logic with AI-assisted development, and implemented the automations the client asked for, on Next.js and Supabase. That is the same loop this role runs, client conversation to scoped delivery to working software, just applied to banks instead of a single client.

I hold Italian EU long-term resident status. I am not currently authorised to work in Spain and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process, and the role is listed as fully remote, so I can also work it from Italy if that suits the team better.

I would welcome the chance to bring that client-facing delivery experience to Triple's bank deployments.

Regards,
Prabhavit Gupta
