Dear United Digital Group hiring team,

I am applying for the Forward Deployed AI Engineer role. I have spent the past three years building AI systems that had to run in production for a real business, not just work in a demo, and moving fast from prototype to something a client actually uses.

At FlowSpace, a live coworking marketplace, I built an AI listing bot on the Claude API and n8n that takes a brochure in any format and drafts a full listing with a human in the loop, over 900 produced so far, and support AI agents that answer customer queries against live platform data and escalate to a person on low confidence. I also automated the marketplace's migration off a legacy stack onto Next.js, Laravel and Supabase while the product stayed live, mapping the old data structure to the new one entity by entity, and the platform grew from 2,000 to over 4,500 users.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform using Affinda and the Claude API: a user uploads a CV, the pipeline extracts the data and scores how relevant that candidate is for specific role types, the result is shown in the frontend, and a standardised Ultra CV is then generated. I also worked with n8n and Eden AI to build the underlying parsing tool.

I hold Italian EU long-term resident status and am not yet authorised to work in Spain. The employer would need to file the applicable permit or sponsorship process, and I am ready to relocate to Barcelona or work remotely and start immediately.

Regards,
Prabhavit Gupta
