Dear UNIQA Hiring Team,

I would like to apply for the AI Engineer role on the UNIQA Agentic AI Platform in Nitra. Over the last three years I have built and operated agentic AI systems in production, which is the core of this role: reusable agent patterns, evaluation, and enterprise-grade reliability.

At FlowSpace, I built and operate an AI listing bot that ingests brochures in any format, PDF, website, photo or spreadsheet, extracts structured data with LLM APIs, and passes it through human review before it reaches the backend; it has produced more than 900 draft listings. I also built support agents that answer customer queries from live platform data and escalate to a human whenever confidence is low, an interaction and exception-handling pattern close to what this role asks for. These agents run alongside OfficeRnD and Nexudus integrated booking flows, so I have had to design for real failure modes, not just a demo.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data with Affinda and the Claude API, scores relevance for specific role types, and generates a standardised profile. Building that with n8n and Eden AI meant designing structured output and quality checks around an LLM step, the kind of evaluation and quality gate work this role calls for.

My working stack is TypeScript, Node.js, n8n, LLM APIs, and RAG-style data extraction, with a habit of shipping agent features that stay reliable once real users touch them.

I hold Italian EU long-term resident status. I am not currently authorised to work in Slovakia and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Nitra and complete that process.

Regards,
Prabhavit Gupta
