Dear UNIQA Hiring Team,

I am applying for the AI Integration Engineer role on the Agentic AI Platform in Nitra. My work has centred on building the integration layer that connects agents and applications to real enterprise systems, which is the surface this role owns.

At FlowSpace, I built REST integrations with OfficeRnD and Nexudus for automated bookings, and developed the CRM integration that consolidates leads and automates lead capture, plus GTM automations for enrichment and routing. I also built and operate an AI listing bot: a source-connector-style pipeline that ingests brochures in any format, PDF, website, photo or spreadsheet, extracts structured data with LLM APIs, and passes it through human review before it reaches the backend, producing more than 900 draft listings so far. Keeping that pipeline reliable meant designing for malformed input, rate limits, and partial failures, not just the happy path.

At Get2Germany, I integrated Google APIs to track platform activity and built AI tools that search for courses, internships and jobs, work that was really about designing a clean contract between an external API and an internal data model. I also integrated the Clubee API across a frontend and ran QA on the resulting features, so I am used to verifying an integration end to end rather than assuming it works once it compiles.

My working stack is TypeScript, Node.js, Laravel, n8n, and API design and integration, with LLM APIs and RAG-style extraction layered on top.

I hold Italian EU long-term resident status. I am not currently authorised to work in Slovakia and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Nitra and complete that process.

Regards,
Prabhavit Gupta
