Dear UiPath hiring team,

I am applying for the Senior Forward Deployed Engineer role in Bucharest. I have three years of professional software engineering experience building AI-driven workflows and automations that ship directly into a customer's environment rather than as a one-size product. I should be upfront that my automation background is in n8n and Python rather than the UiPath platform itself; the shape of the work, tailored solutions in production, iterating with a customer, and integrating across APIs and enterprise systems, is exactly what I have been doing.

At FlowSpace I automated the migration of a live workspace marketplace off a legacy stack onto Next.js and Laravel, mapping the old data structure to the new one and driving the cutover while the product stayed live and grew from 2,000 to 4,500+ users. I also built and own an AI listing bot that turns a provider's brochure in any format into a structured listing with a human in the loop, plus support AI agents that answer customer queries from live platform data and escalate to a human on low confidence, and OfficeRnD and Nexudus API integrations for automated bookings.

At Get2Germany I integrated Google APIs and built AI tools that find courses, internships and jobs for users, using n8n for the automation layer and optimising the underlying database, the same combination of API integration and applied AI that this role asks for.

I hold Italian EU long-term resident status. I am not currently authorised to work in Romania and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process.

I would welcome the chance to talk through how I would ramp on the UiPath platform and bring my automation and integration experience to a scoped customer implementation.

Regards,
Prabhavit Gupta
