Dear Unframe hiring team,

I am applying for the AI Transformation Architect, EMEA role (Germany Remote / Brussels / Stockholm). I am a Full-Stack and AI engineer with three years across eight European companies, most recently as Lead Developer at FlowSpace where I owned the transformation of a live marketplace off a legacy stack onto a coded Next.js and Laravel platform while shipping production AI on top of it. That combination – taking a running enterprise system, making it modern, and adding real AI value while it stays live – is the core of the role you have posted.

On the specific ask about enterprise solutions engineering in complex technical sales environments: at FlowSpace I did not sit inside a pre-sales team, but I did the FDE and solutions-engineering work that a growth-stage marketplace needs. I ran discovery with our platform partners (OfficeRnD, Nexudus), scoped and delivered the API integrations end to end, and worked directly with operational teams and end users to ship features that they could adopt without a handover deck. When we needed a CRM-to-platform pipeline I built it, connected Attio, Amplemarket and Swan, and made lead capture, enrichment and outbound automatic for a growing sales motion. The pattern that connects those pieces is the one your JD asks for: sit with the customer or partner side, understand the operational problem, deliver a working technical solution, and stay accountable for it in production.

The AI transformation half of the role is where I have the most to add. I built and own the AI listing pipeline at FlowSpace: unstructured input (PDF, website, image, spreadsheet) goes in, an LLM extracts a structured listing, human review approves it, and it is pushed to the backend. Confidence scoring, per-field prompts and human-in-the-loop are the reason it works in production. In parallel, I built support AI agents that answer customer queries against live platform data and escalate on low confidence. At UltraStrategy I built the same shape for CV parsing (n8n plus Eden AI), and at Get2Germany I integrated Google APIs and shipped AI-driven internal tools. I am Microsoft Copilot Studio Agent Academy and Tray.ai Build Practitioner certified, which travels well into enterprise contexts.

I am authorised to work remotely from Italy under an EU Long-Term Residence Permit and would use the EU long-term-resident facilitation for Belgium or Germany if the role goes on-site. I am available immediately and would welcome a conversation.

Kind regards,
Prabhavit Gupta
