Dear Unity Advisory Hiring Team,

I am writing to apply for the GTM Engineer role. I build the pipelines, integrations and automations that sit behind a go to market motion, which is what this role is asking for, and I have three years of professional experience doing exactly that across several companies.

At FlowSpace, a workspace marketplace, I built the CRM and GTM automations that support lead capture, enrichment and outbound, alongside the OfficeRnD and Nexudus API integrations that power automated bookings. I also built an AI tool that processes provider data in any format and turns it into structured listings, and support AI agents that answer customer queries from live platform data and escalate to a human on low confidence. All of this ran alongside a live migration off a legacy stack onto Next.js and Laravel while the platform grew from 2,000 to 4,500 plus users.

At Get2Germany, I integrated Google APIs to track platform activity and built AI tools that search for and surface courses, internships and jobs, using n8n to automate the pipeline end to end. That is close to the enrichment and trigger event workflows this role describes.

I am comfortable in a terminal as well as a slide deck, and I already work daily with n8n, APIs and AI tooling to turn a manual process into an automated one. I hold Italian EU long-term resident status. I am not currently authorised to work in the United Kingdom and would need the applicable employer-side permit or sponsorship process; I am also glad to work the role remotely from Italy if that fits the team's setup.

I would welcome the opportunity to discuss how I could contribute to Unity Advisory's GTM engine.

Regards,
Prabhavit Gupta
