Dear Virtual Identity hiring team,

I am applying for the Forward Deployed Engineer role. My last two roles have both meant sitting with a client, hearing the real problem, and shipping working software directly into their environment rather than off a backlog handed down by someone else.

At FlowSpace, I took over a live coworking marketplace and worked directly with the internal team, an external agency and customers to automate the migration off a legacy stack onto Next.js, Laravel and Supabase, mapping the old data structure to the new one and driving the cutover while the product stayed live; the platform grew from 2,000 to over 4,500 users. I also built an AI listing bot on the Claude API and n8n that turns a brochure in any format into a drafted listing with a human in the loop, and support AI agents that answer customer queries from live platform data and escalate to a person on low confidence.

At Urlink, I worked as both the developer and the project manager on an AI-assisted platform build on Next.js and Supabase, taking client requirements directly from the client and implementing client-driven automations, deployed through Netlify and GitHub. That meant prototyping fast, testing what the client actually needed as I went, and hardening what worked into something they could keep using.

I hold Italian EU long-term resident status and am not yet authorised to work in Austria. The employer would need to file the applicable permit or sponsorship process, and I am ready to relocate and travel to client sites as needed.

Regards,
Prabhavit Gupta
