Dear WLG hiring team,

I am applying for the Forward Deployed Engineer (Palantir Foundry) role, based in Brussels with regular trips to Mons. I want to be upfront: I have not worked with Palantir Foundry directly, and I have three years of professional experience. What I do bring is a consistent pattern of being dropped into someone else's live system, picking up an unfamiliar data model quickly, and shipping the integration that makes it work in production.

At FlowSpace I took over a live workspace marketplace and automated its migration off a legacy stack onto Next.js and Laravel: I mapped the old data structure to the new one, chose the migration path per entity, API endpoints or CSV exports, and drove the cutover while the product stayed live, growing from 2,000 to 4,500+ users. I also shipped OfficeRnD and Nexudus API integrations for automated bookings, and built support AI agents that answer customer queries from live platform data and escalate to a person when confidence is low. Stack: TypeScript, Next.js, Laravel, n8n, the Claude API.

At Get2Germany I integrated Google APIs and built AI tools that find courses, internships and jobs for users, and optimised the underlying database, using n8n and the Google APIs directly. That work was the same shape as this role at a smaller scale: understand what the customer's system already holds, build the pipeline that connects to it, and keep it running.

I hold Italian EU long-term resident status. I am not currently authorised to work in Belgium and would need the applicable employer-side permit or sponsorship process. I am ready to relocate, to be on site in Mons as the role requires, and to travel as needed.

I would welcome the chance to talk through how I would approach picking up Foundry and getting productive with your customers quickly.

Regards,
Prabhavit Gupta
