Dear Wärtsilä Hiring Team,

I am writing to apply for the Agentic Automation Expert role with Wärtsilä Global Logistics Services in Trieste. I have spent the past three years building AI agents and automation pipelines that run in production against real business data, which is the core of what this role asks for.

At FlowSpace, I built and still own an AI listing bot that turns a workspace brochure in any format into a drafted listing with a human in the loop, and support AI agents that answer customer queries from live platform data and escalate to a person on low confidence, both running against production traffic. I also shipped OfficeRnD and Nexudus API integrations for automated bookings and built GTM automations for lead capture, enrichment and routing, so I am used to deciding where automation fits into an existing system landscape and integrating it cleanly with the platforms already in place.

At UltraStrategy, I built the CV-parsing pipeline behind the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that candidate is for specific types of roles, the result is delivered to the frontend, and the pipeline generates a standardised profile using the Claude API. I built this with n8n and Eden AI, which is the closest parallel I have to combining rule-based automation with an AI decision layer, the same pairing this role asks for between RPA and agentic AI.

I have not worked with UiPath specifically, and I want to be upfront about that. My automation experience is built on n8n and Python, which the role description names as an accepted comparable platform, and the underlying skills carry over directly: designing multi-step automations, deciding when a process needs an AI agent rather than a fixed script, and integrating that automation with the APIs and data systems around it. I am comfortable with REST APIs and JSON, and I am ready to learn UiPath's specifics on the job.

I am authorised to work in Italy under Italian EU long-term resident status, so I can take up the Trieste role without sponsorship.

I would welcome the opportunity to discuss how I could contribute to the WGLS automation team.

Regards,
Prabhavit Gupta
