Dear Wonderful hiring team,

I am applying for the Forward Deployed Engineer role in Rome, Italy. I work directly with live systems and real customer data, turning loosely defined operational problems into production AI systems, then own the result end to end.

At FlowSpace, I took over a live coworking marketplace and automated its migration off a legacy stack onto Next.js and Laravel, mapping the old data model to the new one and driving the cutover while the product stayed live, growing the platform from 2,000 to 4,500+ users. I built and own an AI listing bot that reads a workspace provider's brochure in any format (PDF, website, photo or spreadsheet) and drafts a structured listing with a human in the loop, producing over 900 drafts. I also built support AI agents that answer customer queries from live platform data and escalate to a human on low confidence, plus OfficeRnD and Nexudus booking integrations and CRM and GTM automations. Stack: TypeScript, Next.js, Node.js, Laravel, n8n and the Claude API.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific roles, the result reaches the frontend, and a standardised Ultra CV is generated. I used Affinda and the Claude API for the parsing and generation, and n8n and Eden AI for the extraction tool itself.

Both roles meant embedding with a live product, measuring real outcomes and iterating until the solution held up in production, which is close to what this role asks for.

I am based in Venice, Italy and available to work from Rome. I am authorised to work in Italy, no sponsorship needed.

Regards,
Prabhavit Gupta
