Dear Wordsmith hiring team,

I am applying for the Product Designer role. I should be upfront: my background is as a builder who designs, not a trained designer. What I bring is the other half of the profile you describe, someone who thinks like an engineer and has also owned UX end to end, prototyping, implementing and shipping the interface myself rather than handing it off.

At FlowSpace, I took over a live workspace marketplace and worked on its migration off a legacy stack onto Next.js and Laravel while the product stayed live, scaling it from 2,000 to 4,500 plus users through iterative product development. I also built an AI tool that processes brochures and drafts platform listings, taking a messy, unstructured input and turning it into a clean, reviewable output, which is close to the kind of problem you describe: behaviour that is not fixed, inputs that are messy, and an outcome that still has to feel simple.

At Qomodo, I implemented Figma designs and built a dashboard for companies to manage their branches, working directly from design files into shipped UI. At Get2Germany, I did UI and UX work, taking designs from Figma through to a working interface. Across these projects I have moved fast between prototype and shipped feature, and I use AI daily as part of how I build.

I do not claim formal design training or a design-system background beyond this hands-on implementation work, and I want that to be clear rather than implied. If you are open to someone who has earned UX judgement by building and shipping products rather than through a design career, I would welcome the conversation.

On logistics: the role is on-site in Edinburgh. I hold Italian EU long-term resident status and am not currently authorised to work in the UK; I would need the applicable employer-side permit or sponsorship process, and I am ready to relocate and complete that process.

Regards,
Prabhavit Gupta
