Dear Workday hiring team,

I am applying for the Software Engineer, Agentic AI & API Platform role in Dublin. I should be upfront that I have three years of professional experience rather than the five stated, gained across eight European companies and projects, but the work itself sits squarely in API platforms and agentic systems, and I use Claude Code daily as one of my core tools.

At FlowSpace, I shipped API integrations with OfficeRnD and Nexudus for automated bookings, plus CRM and GTM automations for lead capture, enrichment and routing, while working with the team to migrate the marketplace off a legacy stack onto Next.js and Laravel with the product staying live. I also built an AI listing bot that takes a workspace brochure in any format and turns it into a structured draft listing with a human review step, and support AI agents that answer customer queries from live platform data and escalate to a person on low confidence, which is the kind of agentic, API-connected work this role is asking for.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data with an LLM, scores role relevance, and generates a standardised profile, using Affinda, the Claude API, n8n and Eden AI. At Get2Germany, I integrated Google APIs and built AI tools that find courses, internships and jobs. Across these projects I have written and consumed REST APIs, handled structured data extraction and validation, and worked in agile, cross-functional teams.

I hold Italian EU long-term resident status, which does not extend to Ireland under the EU long-term-resident mobility directive. I am not currently authorised to work in Ireland and would need the applicable employment permit or sponsorship process. I am ready to relocate and complete that process, and available immediately.

Regards,
Prabhavit Gupta
