Dear ServiZurich team,

I am applying for the AI & Process Automation Engineer role in Barcelona. Turning business processes into maintainable automation, with appropriate human review, closely matches my work across application development, integrations and AI workflows. Your focus on practical delivery and helping colleagues adopt reusable automation is especially relevant to my experience.

At FlowSpace, I helped migrate a live workspace marketplace from a legacy stack to Next.js and Laravel, mapping the existing data and coordinating delivery with the internal team and an external agency. The platform grew from 2,000 to more than 4,500 users. I also built a listing pipeline that processes brochures and other source material into draft listings for human review, producing more than 900 draft records. Other work included support agents using live platform data with escalation to a person when confidence was low.

My toolkit includes TypeScript, Python, n8n, APIs and Claude Code. I have Microsoft Copilot Studio Agent Academy and Power Automate certifications, while my hands-on delivery evidence is strongest in n8n and full-stack applications. I would bring that foundation to IAA's process digitalisation work, alongside experience clarifying requirements and resolving customer issues. I want to develop further within your enterprise governance and engineering practices.

I am based in Venice on CET/CEST, available immediately and ready to relocate to Barcelona. I hold Italian EU long-term resident status. I am not currently authorised to work in Spain and would need the applicable employer-side permit or sponsorship process.

Regards,
Prabhavit Gupta
